Hello
I'm **JavaScript**
and I've been quite
busy lately

about the author

Hi

Full-stack web developer with 7 years of experience. Earlier worker at Xebia
Co-creator of jongo.org

amsellemyves

Authentication riot

Json Web Token, avoids the need of sessions
by signing auth token and storing it client side

Passwordless, avoids the need of passwords
by saving long live cookies & an email on each login

2 years with Angular
goo.gl/5OONxg

Good enough for majority of project

Not good enough for professional web app

Shines for CRUD, prototypes and corp. monoliths

Fails on varying xp, projects intended to grow,
lack of highly xp lead, performance

Ember 2.0

No Big bang

React's trail: virtual DOM

More intuitive

One-way binding first

A transition plan

Early 2015

VS

Full rewrite

Prototype & ideas

Drop directives,
controllers, $scope

No migration path

End of 2015

Angular 2.0

dotJS (17th Nov.)

Julien Lecomte (YUI Lead) **lessons learned**
Yehuda Katz (Ember Team) **on open source**
Substack (browserify & stuff) **offline experiment**

$5000 prize to help pixi & gulp grow

Last but not least

Loki, in-memory document-oriented datastore
Flow, a new static type checker
Spider, a new language that compiles to JS
Guardian, handle oauth flow easily
Shirt « your code in your closet »
